

4.0 Conditional Logic

Conditional logic lets a program make decisions. This topic covers the structures Java provides for branching program flow based on conditions.

Learning Objectives

- Implement decision-making structures (if, if-else, switch)
- Apply Boolean logic and comparison operators
- Analyze program flow using conditional structures

Subtopics

if and if-else

Basic branching and two-way decisions

Switch Statements

Multi-way branching with switch

Boolean Logic

Comparison operators, &&, ||, and !
